ADNAN RIZVI

Data & Visual Analytics | AI Engineering Student

Portfolio • github.com/adnan275 • LinkedIn • Sonipat, Haryana, India

SUMMARY

B.Tech AI student with hands-on experience building end-to-end data analytics projects — from ETL pipelines and Python EDA to interactive Tableau dashboards. Skilled in transforming large, messy datasets into actionable business insights using Python, SQL, Excel, and Tableau.

TECHNICAL SKILLS

Languages	Python, SQL (SQLite)
Python Libraries	Pandas, NumPy, Matplotlib, Seaborn
Excel	Pivot Tables, VLOOKUP / XLOOKUP / INDEX-MATCH, SUMIFS, What-If Analysis, Goal Seek, KPI Dashboards
Visualization	Tableau (LODs, Table Calculations, Calculated Fields, Dashboard Design), Matplotlib, Seaborn
Analytics	EDA, Descriptive Statistics, Correlation Analysis, Feature Engineering, Data Storytelling, KPI Design
Data Engineering	ETL Pipelines, Data Cleaning, Median Imputation, Feature Engineering, Sampling Techniques

PROJECTS

Loan Default Risk Analytics Dashboard | *Python · SQL · Tableau · ETL* [GitHub]

- Sampled a 148k-row dataset to a representative 25k subset; cleaned missing values using median imputation for numerical financial metrics.
- Engineered a 'credit_score_band' categorical feature to convert continuous credit scores into actionable risk tiers for dashboard filtering.
- Built a Tableau dashboard identifying LTV ratio as the strongest default predictor and flagging DTI > 50 as critically high-risk across all borrower segments.
- Surfaced North-East region as highest default-risk geography, enabling risk teams to apply targeted underwriting policies.

Amazon Electronics Market Intelligence | *Python · Tableau · ETL · EDA* [GitHub]

- Built an ETL pipeline to clean and structure raw Amazon Electronics data; performed EDA using Pandas to analyze pricing distributions and rating correlations.
- Developed a Tableau dashboard tracking Avg Rating, Discount %, and Best Seller Rate segmented by product category to surface niche market opportunities.
- Found that high discount % does not strongly correlate with higher ratings; active coupon strategies show measurably higher sales velocity vs. static discounts.

EDUCATION

B.Tech — Artificial Intelligence | Newton School of Technology, Rishihood University | *2024 – 2028*

- Relevant Coursework: Data & Visual Analytics (CSA224) — Excel, Python EDA, SQL, Tableau, Dashboard Design, Data Storytelling
